GOATs

Introduction

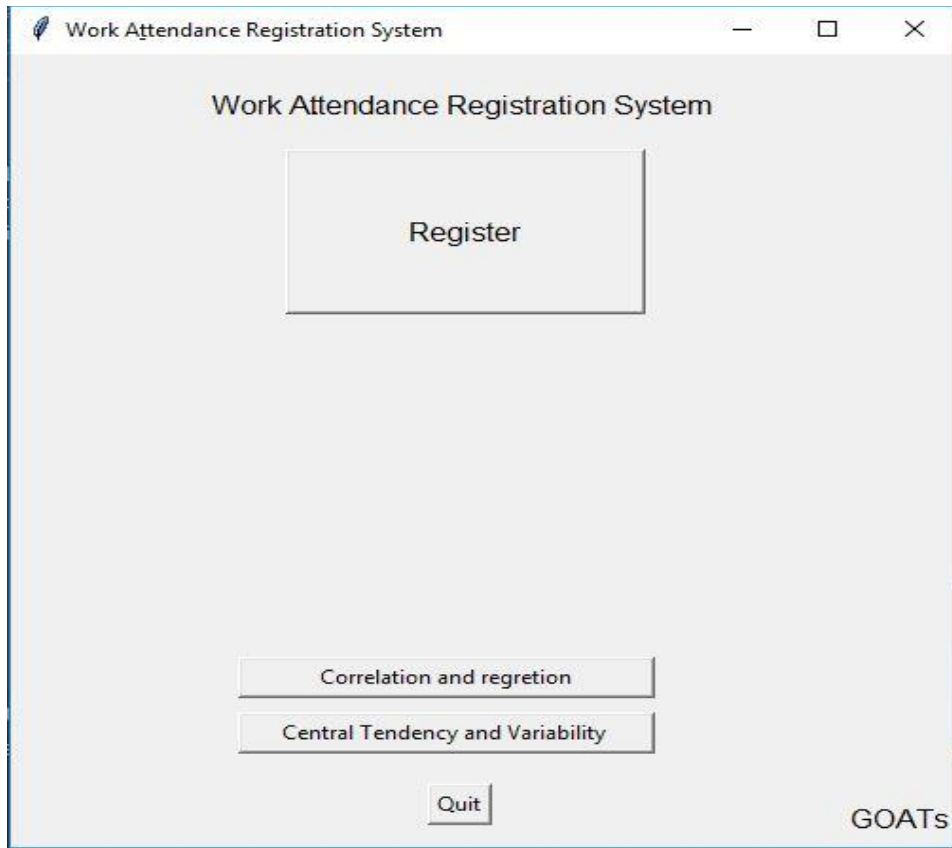

There are some basic statistical analyses that we may need to apply to our data. In our project, we aim to calculate and show the analyzing raw data numerically and graphically.

But first we need to know, when to use certain statistics? and what they mean?

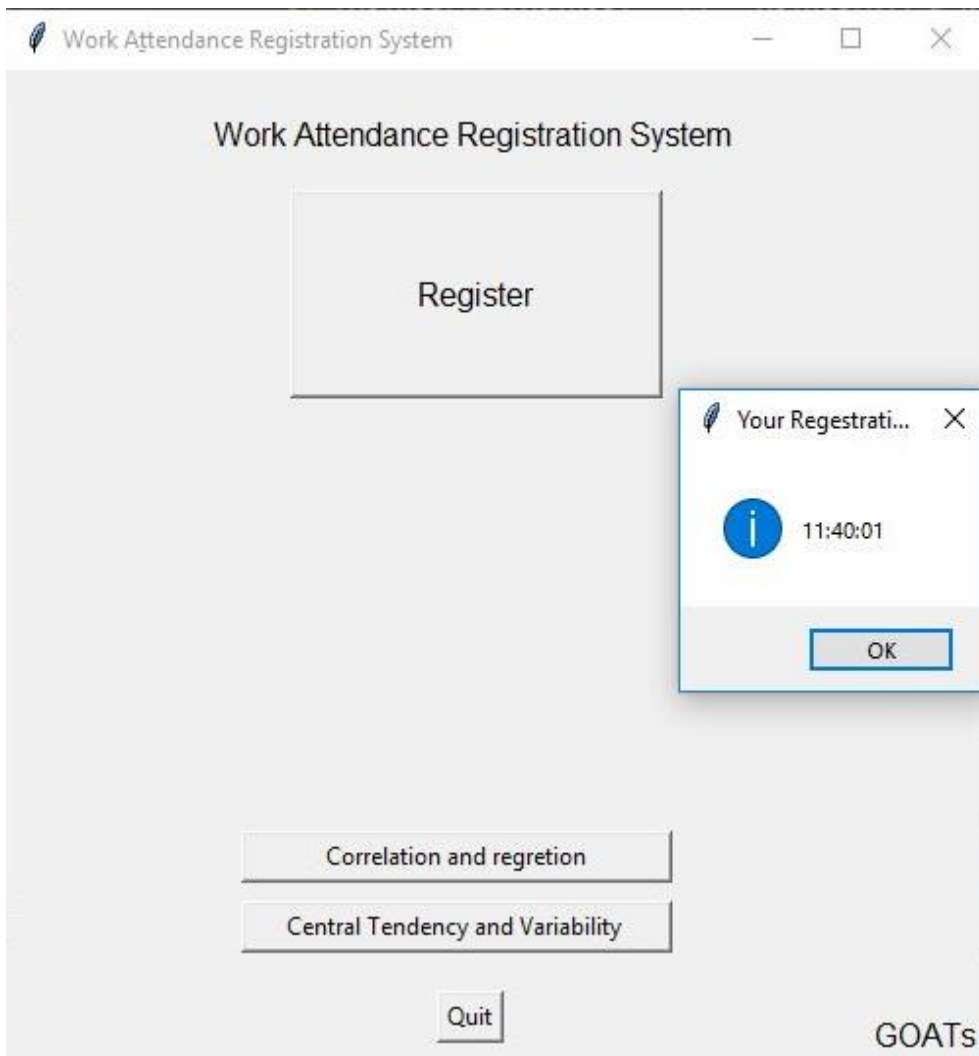

The project is about analyzing the raw data, calculating mean, median, mode, variance and standard deviation and analyzing two-dimensional data by performing correlation and regression

We also show in this project analyzing of the data using Histograms, pie charts, box plot and dot plot.

Work Attendance Registration System

- This System takes the Attendance Registration
- Using the time of device

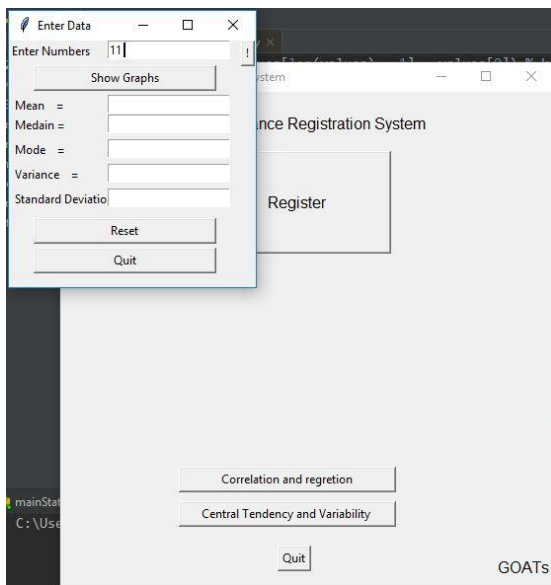

- The Employee should press Register to store its attendance

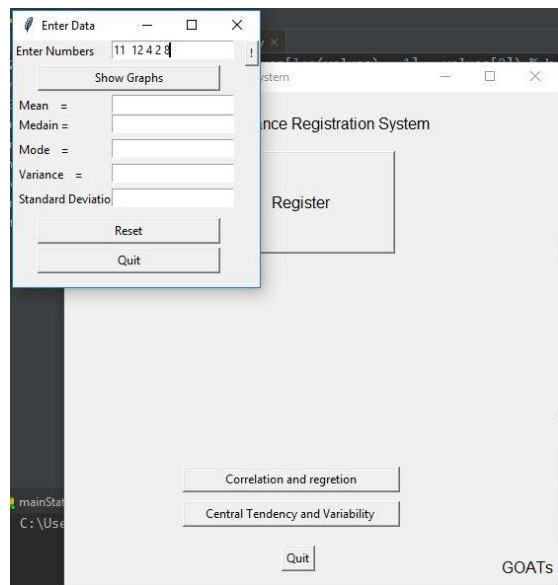

11:41 AM

Time of pc
